FRIENDS'

ALMANAC

FOR THE YEAR

1854:

BEING THE SECOND AFTER LEAP YEAR.

CONTAINING

The Rising, Setting, Southing, Places and Eclipses of the Sun and Moon; the Phases and Age of the Moon; the Rising, Setting, and Southing of the most conspicuous Planets and fixed Stars; Equation of time; the Sun's Declination;

Planets' Places in right Ascension and Declination; the Time of High Water at Philadelphia, &c.

Also an account of the times and places of holding the Meetings of Friends on the Continent of America.

Astronomical Calculations for the 40th degree of N. Latitude, and adapted to the Meridians of

New York, Philadelphia, Baltimore, and Cincinnati.

BY JOSEPH FOULKE, Jun'r.,

OF PENNSYLVANIA.

TO BE CONTINUED ANNUALLY.

PHILADELPHIA:

PUBLISHED BY PARRISH & HOUGH,

No. 4 North Fifth Street.

NOTES TO THE READER.

I. The astronomical calculations in this work, are made to true clock time, the same as in the United States Almanac, the North American Almanac, and other Standard works. The effects of Refraction, according to the latest improved Tables of Bessel, and the Equation of Time, have both been applied to the times of the Sun's rising and setting: so that the Sun, the Almanac, and a good Clock, will agree the year round.

II. A Time-piece may be set very nearly true by the rising, setting, or southing of the Sun, Moon or Stars,—but more accurately by the Sun, (or the southing of the Sun, or a fixed Star) any where on or near the 40th degree of north latitude.

III. The time of the rising, setting, or southing of a fixed Star may be carried several days forward by subtracting, or backward by adding 4 minutes per day.

IV. The common day of 24 hours, begins at midnight, and morning (marked morn.) continues from midnight till noon; and afternoon (marked aft.) continues from noon till midnight; this should be remembered carefully when looking for the times of the rising, setting or southing of the Moon or Stars soon after midnight.

V. New Moon, on the 28th of 1st month, and marked morn. at Cincinnati, under Moon's Phases, will occur in the afternoon at Baltimore, Philadelphia and New York.

☞ Venus (♀) will be Evening Star until the 27th of 2d Month, then Morning Star until the 16th of 12th Month, after which it will be Evening Star the remainder of the year.

☞ Venus and Mercury only are called Morning and Evening Stars; they are never in (☌) with the Sun, because their motions are wholly within the Earth's orbit.

SEASONS.

Sun enters ♈ Third Month 20, at 5h. 19m. P. M.; when Spring commences, and the days and nights are equal.

Sun enters ♋ Sixth Month 21, at 2h. 7m. P. M.; when Summer commences, and the longest day occurs.

Sun enters ♎ Ninth Month 23, at 4h. 12m. A. M.; when Autumn commences, and the days and nights are again equal.

Sun enters ♑ Twelfth Month 21, at 9h. 59m. P. M.; when Winter commences, and the shortest day occurs.

ECLIPSES.

In the year 1854 there will be two Eclipses of the Sun and two of the Moon.

I. The Moon will be partially Eclipsed on the 12th of 5th month, beginning 10h. 52m. A. M., consequently invisible to us.

II. There will be an annular Eclipse of the Sun on the 26th of the Fifth Month, visible as follows:

Beginning at 4h. 10m. Greatest obscuration 5h. 26m. End 6h. 34m. P. M.

Eclipse begins 147° 52′ from vertex to the right.

Digits eclipsed, 10¼ on the Northern Limb.

The line of Central and Annular Eclipse passes through a portion of the Northern part of the United States and Southern part of British America.

This will be the largest eclipse visible in the United States until the year 1900, when the Sun will be totally eclipsed, the centre passing near Washington.

III. A partial Eclipse of the Moon will occur on the 4th of the Eleventh Month, at 4h. 11m. P. M., invisible. The Moon will rise with a slight shade on its Northern Limb.

IV. The Sun will be totally Eclipsed on the 20th of the Eleventh Month, the middle occurring at 5h. 14m. A. M. invisible. This Eclipse will be central and total in the Southern part of Africa, South America, and the Southern Ocean.

The objects of this work have been set forth in former years, and are evident from inspection. The demand for it is gradually on the increase, and it is our desire to make it still more interesting and useful.

Attention has been given to the correction of the times and places of holding Friends' Meetings, as far as information has been received; and as this part of the work has a tendency to facilitate that friendly intercourse which is promotive of love and unity, it is hoped Friends will lend their aid in forwarding accounts of such changes as may have occurred in their meetings. These may be sent, post paid, to the Publisher as directed in the Almanac, or to the Publisher of "Friends' Intelligencer," Wm. W. Moore, No. 77 Filbert St., below 11th, Phila.

A CHEERFUL HEART.

I once heard a young lady say to an individual, "your countenance to me is like the rising sun, for it always gladdens men with a cheerful look." A merry or cheerful countenance is one of the things which Jeremy Taylor said his enemies and persecutors could not take away from him. There are some persons who spend their lives in this world as they would spend their lives shut up in a dungeon. Everything is made gloomy and forbidding. They go moaning and complaining from day to day, that they have so little, and are constantly anxious lest what they have should escape out of their hands. They always look upon the dark side, and can never enjoy the good. That is not religion. Religion makes the heart cheerful, and when its large and benevolent principles are exercised, man will be happy in spite of himself.

The industrious bee does not stop to complain that there are so many poisonous flowers and thorny branches on its road, but buzzes on, selecting his

honey where he can find it, and passing quietly by the places where it is not. There is enough in this world to complain about and find fault with, if men have the disposition.

We often travel on a hard and uneven road; but with a cheerful spirit, and a heart to praise God for his mercies, we may walk therein with comfort, and come to the end of our journey with peace.—*Dewey.*

"ALL IS FOR THE BEST." Dr. Johnson used to say that a habit of looking at the best side of any event is better than a thousand pounds a year.

Bishop Hall quaintly remarks "for every bad there might be a worse, and when a man breaks his leg, let him be thankful that it was not his neck."

When Fenelon's library was on fire, "God be praised," he exclaimed, "that it was not the dwelling of some poor man."

This is the true spirit of submission—one of the most beautiful traits that can possess the human heart. Resolve to see this world on its sunny side, and you have almost won the battle of life at the onset.

GALILEO GALILEI.

Galileo Galilei was born at Pisa, in Italy, in 1564. Intended by his father for the medical profession, he was educated in the University of Pisa; but conceiving a dislike to the study of medicine, the predominant bias of his mind led him to cultivate an acquaintance with Mathematics, and with the other sciences connected with it.

Happening one day to be in the church at Pisa, he remarked the regular and periodic movement of a lamp suspended from the roof of the cathredal: he also observed the equal duration of its oscillations, whether great or small, and this he confirmed by repeated experiments. Having satisfied himself as to the phenomena itself, he imme-

diately perceived the use to which it might be applied for the exact measurement of time; and he employed it fifty years afterwards for the construction of a clock intended for astronomical observations.

Galileo united with the study of mathematics that of physics; and particularly of mechanics and optics. Being informed that Jansen, a Dutchman, had invented a glass which made distant objects appear as if they were near, he turned his attention to the subject, and invented and constructed the telescope, an instrument, by which, as he says, objects appear magnified one thousand times. Turning his instrument towards the heavens, he was astonished by the objects presented to his view. On the surface of the moon, he saw lofty mountains and deep valleys. The galaxy or milky way, he discovered to be a crowded assemblage of fixed stars, invisible to the naked eye. Venus he found to vary in its phases, like the Moon. He observed that the figure of Saturn presented an elongated

appearance, which astronomers have since demonstrated was produced by the ring which surrounds the planet. Jupiter he saw with four moons, which he named Medicean stars; and on the sun's disk he perceived spots, from the motion of which he inferred that the sun revolves about its axis. As the information spread throughout Europe, it became the cause of much speculation and debate among the circles of philosophy.—Many doubted, and refused to believe such novel and unlooked for announcements, because they ran counter to all the preconceived notions which then prevailed in the learned world.

It is curious, and may be instructive to consider, to what absurdity, ignorance and prejudice carried many of those who made pretension to learning and science. "Here, at Padua," writes Galileo, "is the principal professor of philosophy, whom I have repeatedly and urgently requested to look at the moon and planets through my glass, which he pertinaceously refuses to do, lest his opinions should

be overturned." He removed from Padua to Florence, but experience proved that he could have no security at the court of a prince who was obliged to keep up appearances with the court of Rome. His doctrine of the universe was represented by the clergy as contrary to Scripture, and he was cited to appear personally at Rome, and defend himself. But notwithstanding his arguments, the theologians named by the Pope came to the following conclusion:

"To maintain that the sun is placed immovable in the centre of the world, is an opinion absurd in itself, false in philosophy, and formally heretical, because it is expressly contrary to the Scriptures: to maintain that the earth is not placed in the centre of the world—that it is not immovable, and that it has even a daily motion of rotation is also an absurd proposition, false in philosophy, and at least erroneous in point of faith."

Galileo was personally interdicted from professing in future

the opinion which had thus been condemned, and returned to Florence in 1617 with grief not easily to be imagined. During sixteen years he was engaged in preparing a work, in which he undertook to collect all the physical proofs of the earth's motion, and the constitution of the heavens, hoping thereby to convince his adversaries. This work was published at Florence in 1632 and so excited the theologians of Rome that the work was condemned and the author ordained to appear before the Inquisition. He explained his reasons before the authorities and applied himself to the exposition of proofs, which could not be comprehended, and after suffering imprisonment he was again brought before the Tribunal to hear the Sentence read, and to pronounce the abjuration dictated to him, to which the venerable philosopher was made to say, "I abjure, curse and detest the error and heresy of the motion of the earth &c." and to promise that he would never more in future assert any thing, verbally or in writing, imputing "that the

sun is the centre of the world, and immovable, and that the earth is not the centre of the world and movable." It is said that after having pronounced his abjuration, as he rose from the kneeling posture, he stamped on the ground, and said in an under tone, *E pur si muove*, it moves, notwithstanding.

His books were prohibited, he was condemned to suffer imprisonment for an indefinite period, and commanded to recite once a week for three years, the seven penitential psalms. Although the tribunal by which he was condemned did not exercise towards him the extreme severity of the sentence, he still remained under the surveillance of the Inquisition. He still pursued his observations until the loss of sight obliged him, at the age of seventy-four to discontinue his labours. He lived four years in a state of blindness after which a slow fever terminated his long and brilliant career on the 9th of first month, 1642, (the same year in which Newton was born) at the advanced age of seventy-eight

years.—*Abridged from the Encyclopedia Brittanica.*

Though Religion stands not simply in clothes, yet true religion stands in that which bounds and sets limits to clothing as well as other things.—*Sophia Hume.*

I found no narrowness respecting sects and opinions, but believed that sincere, upright-hearted people, in every Society, who truly loved God, were accepted of him.—*John Woolman.*

Plays.

Archbishop Tillotson, on the subject of plays, says:—They are intolerable and not fit to be permitted in a civilized, much less a christian nation. They do most notoriously minister to vice and infidelity. By their profaneness they are apt to instil bad principles into the minds of men, and to lessen that awe and reverence which

all men ought to have of the Almighty and religion; and by their lewdness they teach vice, and are apt to infect the minds of men, and dispose them to lewd and dissolute practices.

WOMAN'S SPHERE.

It was a graceful turn of speech in the gentleman who, when remarking that "woman should keep to her proper sphere," was asked sharply by a lady—"what *is* her *proper* sphere?" "Madam!" replied the gentleman—"it is a celestial sphere!"

This, though at first sight a mere compliment, is replete with truth. The sphere of a true woman is indeed a celestial sphere, and she is an angel if she properly adorns it.

It is the peculiar province of woman to inspire love; and this love, to be lasting, must build itself on esteem. Surely, if there be a heaven, "as is our trust," it must be a sphere in which pure love is the atmosphere; and if there be an object more beautiful than another, or more fitted to in-

spire the purest energies of woman, it must be the attainment of that blessed station in which she shall be an angelic ministrant in this her native and peculiar sphere.

The standard of a woman's excellence—her value in the social scale—is, in all civilized communities, fixed by herself. True, in remote ages, or among savage or barbaric nations, the female has been degraded, and forced to occupy a position more or less subservient; but it is equally true that examples of woman's higher attributes gleam brightly even through these clouded periods of her destiny. Semiramis, Zenobia, Cleopatra, Judith, Jael, Jezebel, and the lovelier characters of Ruth and Abigail, present themselves the more vividly because they are isolated proofs of the power of woman to individualize herself even in the immensity of history.

There is in silent worship something so beautiful, so sublime, so consistent with the relation in which we stand to

God 'that it appears strange there should exist a single doubt of its propriety.

On Silence.

Plutarch ranks silence amongst the virtues, he calls it a something profound and mystical! He says, that silence is a rarer and more divine gift than speech; and adds, 'for which reason I think it is that we have men as professors of the art of speaking; but as patrons of silence we have gods! That which has been reserved in silence is yet to speak, but that which has been spoken can never be restored to silence!

Excess in apparel is another costly folly. The very trimming of the vain world would clothe all the naked ones. Choose thy clothes by thy own eyes and not another's. The more plain and simple they are the better; neither unshapely nor fantastical, and for use and decency, and not for pride. If thou art clean and warm it is sufficient, for more doth but rob the poor and please the wanton.—*William Penn's Maxims.*

GWYNEDD BOARDING SCHOOL

FOR YOUNG MEN AND BOYS.

Situate 18¼ *miles from Philadelphia, on the turnpike leading thence to Bethlehem.*

The course of instruction will embrace the usual branches of a liberal English education, viz.: Orthography, Reading, Writing, Grammar, Rhetoric, Composition, Arithmetic, Algebra, Geometry, Mensuration, Surveying, Astronomy, History, Geography, Natural Philosophy, Chemistry and Physiology. Also, elementary instruction in Latin.

A good assortment of apparatus has been obtained for the purpose of illustrating the subjects connected with Natural Philosophy, Chemistry, Astronomy and Solid Geometry.

Printed reports of the progress in study, conduct, &c., of the pupils, will be forwarded to their parents or guardians monthly.

The location is healthful, pleasant and easy of access; stages which pass the Institution, leave the White Swan Hotel, Race street above Third, every morning at 4 o'clock.

The school year will be divided into two sessions of twenty weeks each; the summer session commencing the third Second-day in the Fifth month, and the winter session on the second Second-day in the Eleventh month.

The terms for boarding, Washing, Tuition, &c., are $60 per session, and no extra charges. Reading-books, pens, ink and

pencils furnished gratuitously. All other books and stationery at the usual prices.

All communications should be addressed to the Principal.

DANIEL FOULKE, *Principal.*
HUGH FOULKE, JR., *Teacher.*

Spring House P. O., Montgomery Co., Pa.
